

Instant XML Data Server™ - Executive Summary

XML, although it has become one of the key IT technologies, is still suffering from an intrinsic Performance issue

» Instant IT SA is i Server™) to solv

» Instant IT SA is introducing IXDS™ (Instant XML Data Server™) to solve the XML Performance Syndrome

XML Sequential Parsing

- Accessing information within an XML Infoset is made by sequentially parsing the whole XML document, leading to:
 - Potentially huge computation times
 - Huge server resource requirements, either RAM or Processing & I/O

IXDS™ - Instant XML Data Extraction

- Instant IT's unique software technology allows to instantly extract any data from the XML document:
 - Independently of the XML Infoset size
 - Directly out of the XML file, without loading the whole data into RAM memory, nor sequentially parsing the whole XML file

How the Application accesses XML

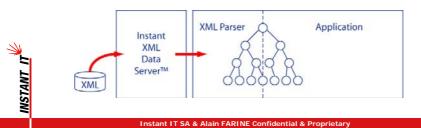

» The Application Software uses the XML Parser (DOM, SAX, ...) for turning the original XML data into a form that can be used by the Application internal data representation:

IXDS™ Liberates the XML Parsers Performance

- » By inserting the Instant XML Data Server[™] between the XML Storage and the XML Parser, one enables the Application Software to:
 - Continue using strictly the same XML Parser, meaning that the Application doesn't need to be modified
 - Thoroughly continue using the same XML Infoset, without any XML structural modification
 - Gain the Instant XML Data Extraction capacity

An Obvious Performance Advantage: XML Size

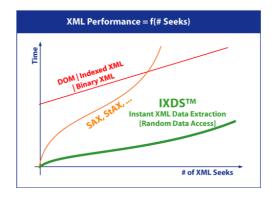

» IXDS™ performance behaves in a close to constant way, independently of the XML Infoset size

An Obvious Performance Advantage: # of Seeks

» IXDS™ displays a clear operational advantage over traditional parsers when processing large amounts of XML Seeks:

But in fact, what is IXDS™?

- » IXDSTM is:
 - A pure software application that is based on Instant IT's unique data extraction & processing software technology
 - A novel way in accessing, extracting and processing massive data and/or heavy request loads
 - A seamless upgrade path for existing XML & IT infrastructures, providing a Performance Quantum Leap without changing the XML Application
- » IXDS™ isn't:
- STANT IT
- Another Proprietary XML format
- Another Binary XML-like format
- Another exotic solution that would call into question your existing XML & IT Infrastructure

Instant XML Data Server™ - Implementation

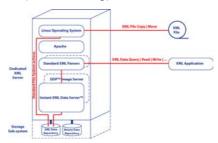

» The Instant XML Data Server[™] is a simple software installed on a standard Linux Storage Server

Instant IT SA & Alain FARINE Confidential & Proprietary

Instant XML Data Server™ - Integration

- » IXDS™ seamlessly integrates with:
 - The IT Legacy Infrastructure (file, archive,...)
 - XML Files can be copied or moved to/from the IXDS™ storage through standard file system actions, at any time
 - The XML Applications
 - Standard XML Parsers (DOM, SAX, StAX)
 - Standard XML Frameworks (XPath, XQuery)
 - The WEB Diffusion
 - Complex documents or contents may include binary images or documents, to be dynamically served by the DDP™ optional image server

IXDS™ - Unique Selling Proposition

- True Random Access to the XML Infoset with Read & Write capability
- » Dramatic XML Parsing & Access Performance Increase
- » Lower Hardware Configuration Dependencies
- » No Preliminary Indexing Phase, nor Transcoding
- » Perfect Complement to Standard XML Parsers: DOM, SAX, StAX, XPath, XQuery
- » Parallelization of the XML Sequential Parsing on multiprocessors, distributed systems or multi-core CPUs

» Directly pluggable into any XML File & Archive legacy infrastructure, with XML File Copy & Move capability at any time

Instant IT Addresses Large Data Sets Issues

- Instant IT provides a unique Software Technology Framework allowing to address the Performance and I&C Infrastructure issues related to:
 - Large & Complex Data Sets
 - Access & Extraction of Massive Data
 - Numerous Simultaneous Users

This Software Technology has been constantly developed and improved since the early 90's. Thanks to our unique methodology and know-how, it is still unrivalled in the worldwide IT market.

Avoiding the Brute Force Computing Syndrome

- » Instant IT's Software Technology solves numerous I&C problems, avoiding the traditional and mostly inefficient Brute Force Computing Syndrome, by:
 - Instantly extracting any data from the storage, like a pipette would do, independently of the original data size and complexity
 - On-the-fly processing the requested extract through extensive macro-pipelining and macro-parallelism
 - Diffusing the result of the data in pipelined mode to the requesting client, in the exact size, format and form
